

C3 – ROBOTIC ARMS

Compact, Light and Flexible

KR10 ROBOTIC ARM SPECIFICATIONS

NUMBER OF CONTROL AXES	6
WEIGHT	55 kg
RATED PAYLOAD	10 kg
MAXIMUM REACH	1.1 m
SOUND LEVEL	< 70 dB (A)
HEIGHT (WITHOUT BASE)	1.1 m

C3 robotic arms are the latest addition to the Protec robotics inventory. Even smaller and more versatile than our D2 model, they have all the same functionality but are even more adaptable for smaller functions and areas with a more limited weight load. Need to get into a tight spot or travel in an elevator with a smaller weight capacity? The C3 is exactly the robot for the event.

Just like their larger robot counterparts, they are extremely versatile, six-axis robots that offer a convincing combination of extreme precision, high speed and agility. Their jointed-arm kinematic system makes them

the perfect partner for all point-to-point and continuous-path controlled tasks in the low payload category.

Thanks to their compact design, C3 robots work with high accessibility even in the most confined spaces. They strike the perfect balance between space requirements, reach, weight, speed and energy consumption. They are an ideal choice where robots will interact directly with guests, be it as bartender or artist, their sleek, small design fits into the most limited of spaces.
